

Nuix Enterprise Discovery

The world's most advanced eDiscovery and electronic investigation platform

take a closer look at

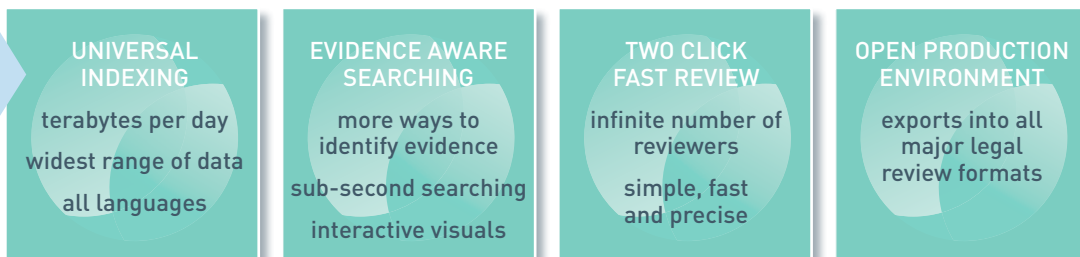

3

nuix

Nuix Enterprise Discovery puts companies in control of their electronic discovery and investigation requirements, enabling them to rapidly find critical evidence for eDiscovery and compliance requests as well as corporate investigations.

- Complete off-the-shelf solution for processing, investigation, analysis, review and production
- Built around the world's fastest and most powerful indexing engine
- Simple and familiar for anyone who uses email
- An ideal eDiscovery solution to work with EnCase® Enterprise
- Intelligent point-and-click processing capability removes the need for time consuming data sorting prior to processing
- Automatically finds emails and documents that are hidden, encrypted, deleted or stored in ways to conceal their identity
- Enables data sets to be rapidly and easily culled, keyword searched and deduplicated
- Dramatically speeds up the document review process
- Produces to all major legal export formats.

Processing

- Scales to meet the requirements of the smallest or largest organizations, easily managing cases with hundreds, millions or billions of emails and documents
- Processes information at rates of up to 45GB per server per hour – an order of magnitude faster than any other technology provider in this field
- Powerful processing capability removes the need for time consuming data sorting prior to processing
- Enables selection of subsets of data for processing and easy addition of more data later if needed
- Major file formats Nuix processes directly:
 - All Microsoft email structures, including EDB files
 - EnCase® forensic and enterprise collections
 - Lotus Notes
 - Groupwise Server
 - All other major business email formats and file structures
- Processes all languages and character sets, all metadata and all associated, attached, embedded files, regardless of depth of hierarchy, compression or naming conventions.

How fast is Nuix?

Nuix is getting faster all the time!

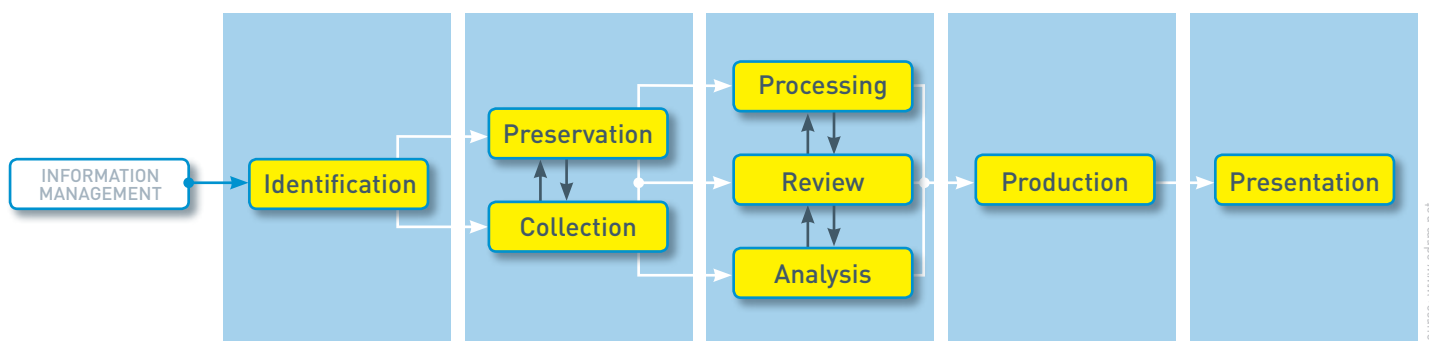

In November 2009, one of Nuix's customers, KPMG Australia, reported processing a 59GB EDB file (including 1.8 million emails and attachments) in 1 hour and 24 minutes.

"The results are impressive when one combines the power of high end processing with the forensic precision and in-depth analysis capabilities of Nuix."

Rodney McKemish

Director, KPMG Forensic

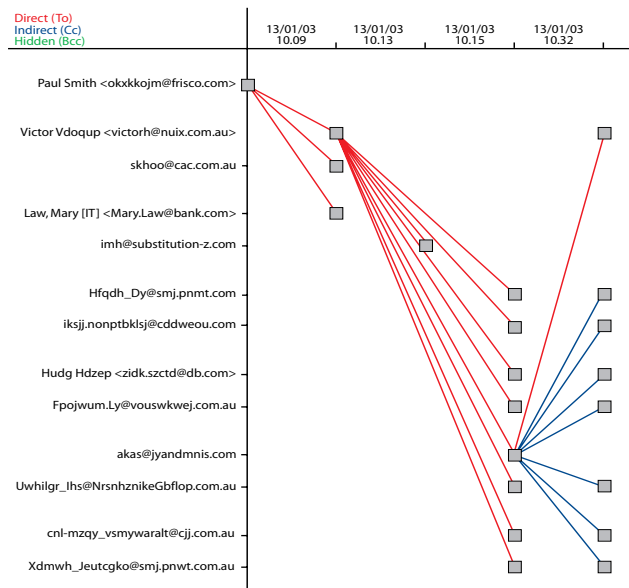

How Nuix Delivers Against the Electronic Discovery Reference Model (EDRM)

Nuix provides a best-of-breed full spectrum EDRM solution for Processing, Review, Analysis and Production.

Search and Analysis

- Interrogates all metadata, text and the binary of documents to forensically identify relevant information, always keeping intact the chain of custody of the document
- Graphical displays instantly facilitate an understanding of who knew what and when
- Interactive displays provide the reviewer with an ability to 'drill down' to identify the most pertinent information in the fastest possible way
- Can be used by anyone required to investigate, analyze or review content, ranging from an eDiscovery or Compliance manager to a General Counsel or Human Resources manager
- Simplifies understanding of the relationship between data and the correspondents, and the relationships between all individuals who are communicating via email in the dataset
- Identifies all exact copies and similar documents and emails
- Retrieves deleted and encrypted information and displays much of this information for review and investigation
- Identifies if two documents are the same or similar, even if the suffix and prefix of the file names have been changed to disguise the identity
- Identifies non-English documents such as Chinese, Korean, and Arabic and has an ability to provide generalized translations
- For more complicated word searches, Nuix supports wildcard and multiple wild card searches, as well as Boolean, fuzzy, phrase, proximity, range and fields queries
- Supports regular expression searches which can be used to identify specific strings of information such as all credit card numbers
- Allows users to import a list of search terms for ease of searching
- Extracts and makes searchable items which might be buried 100+ levels deep
- Searches over terabytes within seconds.

Review

- Enables users to review documents (metadata, communications, attachments, embedded data, text, exact copies and similar documents) in just two clicks
- Intuitive review interface makes reviewers' task easier
- Users can review documents and their associated metadata and redact content
- Classification can be applied individually, to families, duplicates and email strings at once.

Production

- Exports to a wide variety of formats including Native, HTML, PDF, TXT and TIFF
- Emails can be exported in native, eml, msg, mbox, pst and nsf formats
- Reports can be exported in CSV, with custom reports available through scripting
- Graphics are exported in either PNG or SVG
- Nuix Sub Cases can be created to exclude irrelevant or privileged data or to increase/enable mobility of case data
- Exports into an ever-growing list of key legal review tools, including CaseLogistics, Concordance, Discovery Radar, Relativity, Ringtail and Summation.

Simple. Powerful. Precise.

Why Nuix?

- Nuix provides a complete off-the-shelf eDiscovery solution
- Familiar, intuitive user interface
- Nuix's Evidence Aware Searching™ is more powerful than any other search and analysis tool, offering the fastest and most comprehensive set of searching techniques
- All of Nuix's search capabilities are cumulative, so the user can add additional search parameters to quickly isolate any sought after evidence
- Easy to install and minimal hardware footprint
- Drill down to understand not just the full context of data, but also the nature of the relationship between data and the correspondents, as well as the relationships between all individuals who are communicating via email in a dataset
- 64-bit architecture leverages current and future technology
- Nuix finds more.

The Nuix Difference

- Nuix's indexing engine is an order of magnitude faster than other solutions ... and getting faster
- Processes file types that no other eDiscovery software provider can – making the eDiscovery manager's life easier
- Powerful and flexible scripting engine can automate repetitive tasks or build complete, custom workflows
- Provides a proactive email monitoring system capable of scanning all email at a scheduled time
- Directly targets binary, eliminating third party APIs, to maximize scale and hardware utilization.

Used by the world's major corporate regulatory organizations in the US, the UK, Australia, HK and Japan. Nuix is the regulators' choice.

ABOUT NUIX

Nuix has spent the past ten years developing and refining the world's most advanced eDiscovery and electronic investigation software. Nuix revolutionizes the way government and private organizations investigate electronic information, improving simplicity and accuracy, and slashing the time and cost of investigations. Nuix customers include major corporations, advisory firms, state and federal government departments, police and anti-corruption bodies, financial institutions, law firms, litigation support firms as well as regulatory and security agencies. Nuix has customers in over twenty countries.
